PixSort — ICP & App Store Brief

Compiled April 2026 · Based on 7 customer interviews + workshop validation · For co-founder review

THE HYPOTHESIS

We've been talking to a wider-than-ideal group. Most people we've spoken to are *not* the ICP — they validate the problem exists, but they won't pay to solve it. The people who will pay are a specific subset of creators: **iPhone-first, monetizing their content, with editors in the loop.**

Key clarification: **we sort your camera roll, not an SD card.** This is an iPhone-native solution for creators living on their phone.

ICP DEFINITION

Primary ICP **iPhone-First Creators Who Monetize and Use Editors**

- **UGC creators** — multiple brand clients, multiple content categories on one phone, already paying for tools that make their workflow faster
- **Business owners who create content** and have outsourced editing — they can't hand over a messy camera roll, so organized files are a business need
- **Lifestyle / day-in-the-life creators** — shooting across categories (food, travel, fitness, product) and need to find specific clips fast
- Time is money — an hour saved on finding clips is real ROI
- Making money from content = $9.99/month is easy math

Secondary ICP **iPhone-First Creators Building Toward Monetization**

- 10K–100K followers, not yet using editors but accumulating content fast
- Feel the pain acutely but haven't built a workaround yet
- The camera roll chaos is already slowing them down — PixSort is the moment they get serious about their workflow

Not ICP

- Event photographers / DJs — recency-first workflow, no backlog problem
- Agency social media managers — don't own the camera roll
- Desktop-first organizers — already solved the problem manually
- Casual users without a content business — $5/mo ceiling, pain is real but dull
- SD card / camera users — different workflow entirely

The filter question: "Do you shoot multiple types of content on your iPhone and need to find specific clips later?" Yes + frustrated = ICP. No / event-only = not ICP.

PAIN POINTS → SOLUTIONS (FROM INTERVIEWS)

The Pain	PixSort's Solution
Camera roll has thousands of photos — finding one specific clip means scrolling for 30–60 minutes *— Jaylin, Tiffany, Carlos*	AI auto-sorts every photo and video into albums by category. Search by keyword and find it in seconds.
Can't share raw camera roll with editor — have to manually organize albums first, which falls apart over time *— Carlos (independent), Tiffany (origin story)*	Albums stay sorted automatically. Share clean, organized folders with your editor anytime — no prep required.
Phone storage is maxed out — too many videos accumulated, can't film new content *— Jaylin, multiple*	Cleanup tab identifies duplicates, screenshots, and large files. Reclaim your storage without losing content.
Content that used to take 1–3 hours to make now takes that long just to *find* the clips *— Jaylin*	From 3 hours to 15 minutes. Organized content = faster production = more posts.
Starting to organize is paralyzing — no one knows where to begin *— Emma, multiple*	PixSort starts on its own. Open the app, allow access, and it begins sorting your library automatically.
Albums created manually fall apart — 6 months later you're back to square one *— Tiffany's origin*	AI keeps albums updated continuously. Every new photo and video gets sorted as you capture it.

APP STORE SCREENSHOT COPY — DRAFT

7 screens · awaiting competitor screenshot examples to refine format · questions flagged below

SCREENSHOT 1 — HERO

Stop searching. Start creating.

PixSort organizes your iPhone camera roll automatically — so finding your content takes seconds, not hours.

SCREENSHOT 2 — THE PAIN

Your best clips are buried in thousands of photos.

AI scans your entire library and sorts every photo and video into albums — automatically, on your phone.

SCREENSHOT 3 — EDITOR WORKFLOW

Your editor needs organized files. Now they have them.

No more manually prepping your camera roll before every session. Share sorted albums instantly.

SCREENSHOT 4 — SEARCH

Find any clip in seconds.

Search your entire library by keyword. "Gym." "Bali sunset." "Product unboxing." PixSort finds it.

SCREENSHOT 5 — CUSTOM ALBUMS

Your categories. AI does the rest.

Create albums for any content type — PixSort finds and files every matching clip automatically.

SCREENSHOT 6 — SPEED / ROI

From 3 hours to 15 minutes.

Spend less time organizing. Spend more time posting. Your content pipeline just got 10x faster.

SCREENSHOT 7 — WHO IT'S FOR

Built for creators who treat content like a business.

UGC creators, lifestyle creators, business owners with editors — PixSort is your content OS.

OPEN QUESTIONS FOR SPENCER

1. **Is custom album creation currently live?** Multiple people said this was the feature that would convert them. If it's not live yet, pull Screenshot 5 for now.
2. **Paywall structure:** 500 photos free then pay? Does the free tier persist or expire? This affects how we describe the onboarding experience.
3. **Confirmed App Store pricing?** $9.99/month — what's the annual price?
4. **iOS only right now?** Affects how specifically we say "iPhone" in copy.
5. **Is storage/file cleanup by size a current feature?** Storage pain came up in nearly every interview — if live, it earns its own screenshot.
6. **Any real user quotes?** Even one strong pull quote could anchor a screenshot or the store description.
