PixSort Interview — Antoine Boado

Conducted April 2026 · Remote (video call) · ~45 minutes

Niche: UGC Creator — apps, software, consumer brands **Revenue:** $100K+ in brand deals

Camera: iPhone 16 + SD card (DSLR for some clients) **Camera roll:** 10,000 items (personal + work mixed)

Editor: Has worked with one, looking to hire again

Strong ICP | Editor Workflow Validated | Would Pay | UGC Ad Expert

STANDOUT INSIGHT

Antoine independently confirmed the editor workflow use case as his single biggest reason to pay for PixSort — unprompted, after seeing the app:

> *"The thing you mentioned about working with an editor — that is probably the biggest use case I would use this for. I've worked with an editor before and I had to create folders of media files. When I hire another editor again, I would use this specifically to categorize and have them go through that B-roll instead of using stock footage."*

He also confirmed he would pay:

> *"I would probably pay for this if the sorting worked well."*

STORAGE & FILE MANAGEMENT PAIN

- 10,000 items in camera roll — personal and work mixed together
- Needs to upgrade iCloud storage
- 7 SD cards, over 1TB of content accumulated
- Just bought an external hard drive to start backing things up
- Raw clips go to his downloads folder — "I'm really bad at management"
- Has 4 copies of the same file on his desktop from reuse (files named with -1, -2, -3 suffixes)
- Finals go to Google Drive; raw clips stay disorganized on the desktop

FINDING CLIPS — THE REAL WORKFLOW

He uses a **visual memory index** — he remembers roughly when he filmed something and scrolls to that time period in his camera roll:

> *"It's literally me being like, 'Damn, I'm pretty sure I played basketball last May' — let me just scroll through my timeline. I have a good memory so it's easy to kind of index where things are gonna be,*

> *but it usually is like five minutes of me scrolling and trying to remember where things are."*

- ~5 minutes per search, happens 2–3x per editing session
- Reuses B-roll from past clients — scrolls until he spots the "batch" from that shoot
- Has footage from the last 4 years he still references
- During editing, will stop mid-session to go back and find a clip — breaks his flow

LIVE APP DEMO

- Downloaded TestFlight during the call — 68 photos organized
- Called the sorting "pretty good" — doing a decent job on categories
- Searched "ice cream" — immediately pulled up a video from an in-store shoot earlier that day
- Saved it as a smart album — understood the concept immediately
- Sent an album to camera roll — went straight to his camera roll (device behavior may differ)
- Accidentally sent all albums to camera roll — Tiffany noted this is actually the ideal end state
- Noticed duplicates, screenshots, and blurry photos in Clean Up — immediately saw value
- Had 5 hours of volleyball game footage flagged as large files — said he'd delete it

PRODUCT FEEDBACK (UNPROMPTED)

Less is more on albums. He got 12–13 albums auto-generated and said he'd realistically use 3. His take:

"I think less is more. Give fewer albums because it's less overwhelming. And then just have a big option of 'Create Your Own Sorted Album.'"

His preferred categories: travel (especially plane/airport shots), food, fitness/sports, dog, talking head.

"Remove from camera roll" is confusing. He thought it would permanently delete photos from his camera roll. Needed clarification that it just removes the album link, not the photos.

Video-only filter requested. As a content creator, he only needs clips — a mixed album of photos and videos is still too much to sort through. Asked if there's an option to filter just videos.

ICP ASSESSMENT

Strong ICP. Storage pain is real and acute (10K items, 1TB+ accumulated, iCloud maxed). Reuses B-roll constantly and spends real time searching for it. Has worked with an editor and wants to hire again — explicitly named the editor workflow as his #1 use case. Said he'd pay if sorting works well.

One nuance: uses DSLR for some client work, so not 100% iPhone-first — but personal brand and B-roll content is iPhone-based, which is the relevant use case for PixSort.

UGC AD ADVICE (EXPERT INPUT)

What app brands get wrong in briefs:

- Full script handed to creator — kills authenticity
- No walkthrough of what the app actually does or who it's for
- No asset pack — creators end up doing blurry screen recordings of random screens
- Fix: provide a demo call, screen recording references, logo pack, clear tone direction

What makes a good app ad hook:

> *"Going more organic is better. All tech and app UGC looks the same — dark moody room, podcast setup, mic. I'm working with Perplexity and they want me to keep doing that style and they all look the same to me."*

For PixSort: show real people integrating it into their actual workflow — not a scripted demo in a dark room.

Value prop framing for UGC creators:

> *"You got to really show the value — how much time is saved, how much more money can be generated. If you can convey it like a five-year-old understands: you sort pictures, you get an album, and you make more money."*

Warning on UGC creator segment: Many UGC creators are in "I'm on my UGC journey" mindset, not "I'm building a business" mindset. They resist investing in tools. The right sub-segment is business-first UGC creators who already spend on software.

PARENT / FAMILY ANGLE

Antoine is a dog dad, not a parent — the parent angle didn't apply directly. He validated the market concept though:

> *"More apps are getting targeted toward parents who just want ease of access. They're becoming savvier around tech. And there's more of an emotional tie — categorizing photos of your kids and trips. That makes sense."*

KEY QUOTES

> *"The thing you mentioned about working with an editor — that is probably the biggest use case I would use this for."*

> *"I would probably pay for this if the sorting worked well."*

> *"Less is more — give fewer albums, then have a big 'Create Your Own Sorted Album' option."*

> *"You sort pictures, you get an album, and you make more money. Say it like a five-year-old would understand."*

> *"All tech and app UGC looks the same — avoid that. Go organic, make it feel like a real video."*

> *"A lot of UGC creators are reverse to investing in their business. You really have to show the ROI."*

PRODUCT FLAGS FOR SPENCER

Flag	Source
"Remove from camera roll" language — users think it permanently deletes photos from their actual camera roll	Antoine live test — stopped mid-demo to ask if his photos would be deleted
Too many albums upfront is overwhelming — less is more, fewer defaults + prominent "Create Your Own" CTA	Unprompted — said he'd only use 3 of 12 auto-generated albums
Video-only filter — creators want clips separated from photos in search and albums	Direct product request during demo
Custom album creation CTA needs to be more prominent — not buried in the search flow	Both Tiffany and Antoine flagged this during the demo

REFERRALS

- **Britt (SunnyBDrake)** — TikTok creator, large following, just launched a community, films 100% on iPhone, met at a UGC creator connect where Tran was also present. Antoine put her contact in the chat. Priority intro.

> **ICP Verdict: Strong ICP.**
>
> Real acute storage pain (10K items, 1TB+ accumulated, iCloud maxed). Reuses B-roll constantly and spends real time searching. Has worked with an editor, wants to hire again — explicitly named the editor workflow as his #1 use case. Said he'd pay. Also provided the clearest value prop framing of any interview so far: time saved + money made, explained simply.
>
> Bonus: the UGC ad advice is directly actionable for PixSort's own content strategy — go organic, avoid the dark-room aesthetic, and always provide a full asset pack when briefing creators.
